VelvetCARE 

We are all witnessing the process that the **Earth's resources are being depleted** at an alarming rate. At Velvet Care **we do not agree with this state of affairs** and make many efforts to counteract this problem.

We do start from ourselves. We have set tasks **for our own organization**, hoping that others could get inspired and start making a change too. We take actions **at local scale** thus contributing to care about the environment **in macroscale**.

We developed the strategy called **Eco Agenda Velvet Care**. It consists of objectives and initiatives leading to their achievement with respect to the environment. Scheduled for the forthcoming years it is **a map of our ambitions** and goals with defined actions related to **sustainable development**.

At the threshold of the 21st century, it all depends on us. At Velvet Care, we are convinced that **we are the change!**

We believe that in order to **maintain the leadership position**, develop the company and meet the needs of millions of consumers who choose our brands every day, we must not only **offer the best products** but also **set an example by protecting the place we all call home**.

With care for nature, for the benefit of you

PROTECTION OF FOREST RESOURCES

In the Velvet CARE factory, cellulose is used to manufacture tissue paper (from which the final products are made). The raw material used in the production processes comes from forest resources that are completely renewable and confirmed by forest management certifications. This means that Velvet CARE only uses cellulose from certified and controlled sources. Look for certified Velvet Care products with logo in our offer:

- FSC® (FSC-C119667)
- PEFC (PEFC/32-31-086)

RECYCLING

Velvet CARE uses raw materials that are mostly recyclable. Toilet paper packaging is made from 30% recycled raw material called recycle. Velvet product packaging and waste from used products should be sorted according to the current segregation rules.

REDUCTION OF GREENHOUSE GAS EMISSIONS

Since the start of Velvet CARE, greenhouse gas emissions per ton of product produced have been significantly reduced. Today, at the plant in Klucze, process steam for paper machines is generated in modern gas-fired boiler plants (whereas previously a coal-fired boiler plant was used for this

purpose) and production processes are optimised for maximum energy efficiency. Thanks to these investments, the spectacular result of reducing the carbon footprint by around 50% per ton of tissue paper produced has been achieved from the beginning of Velvet CARE to the present day.

REDUCTION OF PLASTIC USE

Since the company's debut on the market by the end of 2023, the share of plastic in raw material purchases has been reduced by as much as 44%. In line with its sustainability strategy Eco Agenda 2025, Velvet CARE is constantly working to improve this result.

WATER EFFICIENCY IN THE PRODUCTION PROCESS

The Velvet CARE factory is proud of its modern machinery, which is constantly being improved with the natural environment and its immediate surroundings in mind. In 2021, a new, third paper machine was installed, which meets the highest ecological and quality standards and uses water almost in a closed loop. The efficiency of its purification processes is also constantly increasing. Since the establishment of Velvet CARE to the present, the consumption of fresh water per ton of tissue paper produced has been reduced by over 50%. Further processes of optimizing its consumption and purification are carried out on an ongoing basis.
